The provided code stub reads two integers, a and b, from STDIN.

Add logic to print two lines. The first line should contain the result of integer division, a//b . The second line should contain the result of float division, a/b .

Example

a = 3
b = 5

- The result of the integer division 3//5 = 0.

- The result of the float division is 3 / 5 = 0.6

Print:

0

0.6
